Order from LC or SLA mi\$2. 40, ph\$3. 30 61-19377

Trans. of Kristallografiya (USSR) 1956, v. 1, no. 6, p. 696-702.

The temperature dependence of the specific susceptibility and the magnetization of natural pyrrhotite specimens is investigated within the temperature range from room temperature to 600°C. The presence of thermal hysteresis of the magnetic properties at temperatures below the λ peak is confirmed. It is shown that the transformation in the region of the λ peak is diffusive in character and takes place isothermally. Rapid cooling leads to absence of a λ peak on the susceptibility-temperature curve and the magnetic properties of (Metallurgy--Ferrous Metals, TT, v. 5, no. 11) (over)
